

# RK Grinder Control Upgrade (SMCC)

## RK Centerless Grinding Machine Upgrade

### Benefits:

- Only 3 days for install
- No retraining required
- Extend machine's life
- Spare parts available

The original control board in the RK Grinder, a Delta Tau SMCC, is obsolete and repair or spares are rare options. We have come up with an upgrade to the control that provides a new Delta Tau UMAC control system that is still being produced. The grinder will operate exactly as before only it will be a little more responsive. The upgrade usually takes about 3 days and provides many more years of useful life for your RK centerless grinder.
